

**Process safety is my responsibility.  
Primatech is my choice.**

## **AUDITWORKS™ 1**

PROCESS SAFETY SOFTWARE BY *PrimaTech*

### **CONDUCT AND DOCUMENT SAFETY AND ENVIRONMENTAL COMPLIANCE AUDITS**

AUDITWorks™ assists in the conduct and documentation of safety and environmental compliance audits. AUDITWorks provides the means to facilitate all types of audits. Audit against government regulations, industry standards or your company's own health, safety and environmental standards.

AUDITWorks provides guidance in conducting audits, a framework in which to record audit results including data management capabilities, and protocols for evaluating compliance that can be used to audit various programs, including OSHA's Process Safety Management and EPA's Risk Management Program regulations.

Built-In Compliance Checklists include: OSHA PSM Compliance Directive Audit Checklist (Instruction CPL 2-2.45A), OSHA PSM Standard Checklist (29 CFR 1910.119), Primatech OSHA PSM Checklist, and EPA RMP Rule Checklist (40 CFR 68). You can also import and customize your own checklists.

AUDITWorks was designed to help you spend less time learning the software and more time conducting your audit. With its easy step-by-step approach of proceeding into the audit worksheet, you'll be conducting your audit within minutes.

If you are already familiar with other Primatech software such as PHAWorks®, you will find that AUDITWorks has similar functionality, so your transition will be easy.

### **FEATURES**

- Perform PSM, RMP and other types of HSE audits
- Use built-in checklists from OSHA, EPA and Primatech
- Create your own custom checklists
- Add weights to checklist questions to note importance
- Structure your audit into multiple levels (System, Element, Category)
- Perform statistical analysis of the audit results
- Generate customized reports
- Easily navigate between worksheets
- Customize the appearance of your audit worksheet
- Create custom worksheet views
- Customize data categories: Questions, Findings, Weights, Recommendations, etc.
- Create references to entries within the worksheet
- Copy files from other projects
- Enter project information about the audit
- Password protect your projects
- Enter common data in Quick Entry lists for use throughout the study
- Auto number columns using cascade or simple numbering
