Specialists in Safety, Security and Risk

**Process safety is my responsibility.  
Primatech is my choice.**

## **PHAWORKS<sup>®</sup> 5** PROCESS SAFETY SOFTWARE BY *PrimaTech*

### **HELPING COMPANIES IMPROVE PHA STUDIES WITH THE INDUSTRY'S MOST RELIABLE AND TRUSTED SOFTWARE**

PHAWorks<sup>®</sup> is a proven asset for completing your Process Hazard Analysis (PHA) studies. Primatech's software design has benefitted from the completion of thousands of PHA studies (e.g., HAZOP, What-If, FMEA) by Primatech's consultants, as well as feedback from users throughout the world. Not only do we develop software, but as one of the leading consulting companies facilitating PHA studies, we use the software daily.

PHAWorks can be used to conduct PHA studies on any process from the smallest to the largest. The design of the software allows you to easily begin conducting your studies by leading you through each step in the PHA. In a very short time, you will be documenting PHA studies more quickly and efficiently while keeping your teams focused on the task at hand.

With PHAWorks, PHAs have become easier, quicker and more cost-effective. With the time and cost savings it provides, PHAWorks is an essential tool for your company. No program for completing PHAs has been used or trusted more throughout the world than PHAWorks.

Primatech has been developing software and conducting PHA studies worldwide for more than twenty years. We have acquired a wealth of experience in designing tools for documenting PHA studies and have incorporated the knowledge gained in PHAWorks.

### **CAPABILITIES**

- Conduct different types of PHAs (e.g., HAZOP, What-if, FMEA, MHA, DHA)
- Built in protocols allow you to confirm requirements are completed for conducting initial and revalidation PHAs
- Easily navigate using Quick Access, bookmarks and navigation tools
- Generate reports from twelve default reports each of which can be customized. Define new report types
- Use Quick Entry lists to speed up worksheet data entry
- Customize and instantly switch to any of five different worksheet views
- Add custom fields to the worksheet
- Auto number columns using cascade or simple numbering
- Create references to entries within the same or different worksheet
- Automate entries using a knowledge database
- Risk rank your hazard scenarios
- Create multiple worksheet revisions and compare them to show data changes
- Revalidate your PHA studies using special software features
- Use built in analysis tools to conduct your PHAs
