

## **Audits and Assessments**

Primatech provides companies with a trusted, third-party perspective that is needed in today's regulatory climate

### **THE PRIMATECH ADVANTAGE FOR AUDITS AND ASSESSMENTS**

Primatech has extensive experience in auditing process safety and risk management programs and has used this experience to develop audit approaches that are highly efficient. We have unsurpassed knowledge of regulatory requirements and industry standards that enables us to quickly identify program deficiencies. Our auditors' experience in developing and implementing process safety and risk management programs provides them with insight into what is required for successful program implementation.

We know what regulators look for during inspections based on our work in preparing process safety and risk management guidelines for government and industry. Primatech's audit protocols reflect the expectations of regulators and help to ensure the intent of the regulations is covered. This is vital for performance-based regulations such as PSM and RMP.

Primatech teaches training courses on auditing and on process safety, security, and risk management programs. Primatech is internationally recognized for its work in process safety and risk management. This provides a stamp of credibility for the audits we conduct.

### **SERVICES OFFERED:**

#### **Performance of Compliance Audits**

We provide auditors to conduct process safety, risk management, security, and other types of audits. We can provide an individual auditor or a team of auditors based on the size and complexity of the facility being audited.

#### **Performance of Assessments**

We perform simpler reviews that are less formal than audits to help determine whether programs have gaps or deficiencies. We provide a report documenting the assessment, as well as an implementation plan for correcting identified gaps. These assessments can often serve as a starting point for redeveloping programs.

#### **Audits and Assessments of Program Elements**

We perform single element compliance audits and assessments for companies that need to pay extra attention to certain process safety elements, such as mechanical integrity or management of change.
